

## Preliminary Notes: Centiiv

### Brewlabs Services Hub

Summary: Centiiv is an IBEP20 token smart contract. It is written in Solidity and compiled using build 0.5.6. Contract supports minting, burning and basic transferring of tokens between addresses.

*Audit package:* Standard security

*Deployment Status:* Deployed to BSCScan

*Files Audited:* Centiiv.sol

*Audit Result:* **Security PASSED**

**Disclaimer:** This audit documentation is for discussion purposes only. The scope of this audit was to analyze and document Centiiv smart contract codebase for quality, security, and correctness. This audit guarantees that your code has been revised by an expert.

### Overview of Audit

No critical security issues identified.

0 critical logic issues identified.

0 critical security issues identified.

0 major security issues identified.

0 major logic issues identified.

1 informational issues identified.

### Security issues

Informational issues detected:

1. Layout of the file does not follow [Solidity guidelines](#).

**Conclusion:** The Brewlabs team thank you for the opportunity to review and audit your smart contract code. The data from this report will be formalised in the audit publication for your community. Keep in touch as we offer discounts for repeat business and on a range of other services!  
The Brewlabs Team.
